12/2024 – **current**

Technologies - Flutter, iOS, Android.

Role & Responsibilities – Worked on company projects.

TECHNICAL SKILLS

Programming Language | Flutter (Dart), Java, Kotlin

State Management | GetX pattern, Stacked, BloC, Provider

Payment Providers | PayU, RazorPay, In-App Purches

Firebase Products | Cloud messaging (App notification), Remote config, Analytics, Ad mob

Database | Firestore, SQLite, Supabase

Architecture | GetX, Stacked, Base

PROJECTS

Echo-Health | FlutterFlow + Supabase + Custom Plugin + Custom action

- **Description:** Developed and maintained a HIPAA-compliant web application designed to streamline clinical documentation through smart dictation and AI-assisted note-taking. Built using FlutterFlow and Supabase, the platform enables healthcare professionals to manage patient sessions, generate medical templates, and collaborate with team members. Integrated advanced features like audio waveform visualization, real-time transcription, template versioning, and secure team-based sharing. Responsible for UI/UX enhancements, bug fixes, custom logic, API integrations, and performance optimizations across multiple modules..

Real Time Prayers | FlutterFlow + Dart + Custom Plugin + Custom action

- **Description:** In this app, users may ask for prayer, and the authorities can respond through audio that has been recorded. I have handled the theme, the global widget, and the player and audio recorder customization for this project

Android App Link: <https://play.google.com/store/apps/details?id=com.realtimeprayers.app>

IOS App Link: <https://apps.apple.com/vn/app/real-time-prayers/id6464437071>

HipSmile | FlutterFlow + Custom Action + Firebase Cloud Function + Google Map

- **Description:** In this app, users can share their things with anyone. Give and receive goods and services in different categories such as health, education, material goods, volunteer work, or others. With its geolocation system, HipSmile allows you to find easily announcements (donations or requests) near you.

IOS App Link: <https://apps.apple.com/in/app/hipsmile/id1572601974>

PGMS(Public grievance management system) | Flutter

A grievance management system application that allows users to report, track, and resolve their grievances or complaints related to various issues, such as service quality, product defects, employee behaviour, etc. It provides features such as grievance submission, status update, escalation, feedback, etc.

Tack stack: Flutter, Dart, Firebase.

Android App Link: <https://play.google.com/store/apps/datasafety?id=yws9.tech.pgms>

GOFINX | Flutter

I work on this app to maintain and enhance its features, such as firebase dynamic linking, that provide valuable services to the users.

Android App Link: https://play.google.com/store/apps/details?id=com.gofinx.app&hl=en_IN

iOS App Link: <https://apps.apple.com/in/app/gofinx/id6444019342>

ZEROCART | Flutter

An e-commerce application with outfit room and measurement customisation features is an application that allows users to buy clothes online and try them on virtually. Users can use this application on dark and light mode.

Tack stack: Flutter, Dart, Custom action.

STARKID | Flutter

Developed a mobile application designed to engage students through challenges and competitions, fostering participation and achievement. The app focuses on encouraging skill development and recognising accomplishments.

- **Challenges & Competitions:** Students can join various challenges and competitions across different categories.
- **Certificate Generation:** Automatically generates participation and achievement certificates after completing events.
- **Ranking System:** Displays student rankings and positions to motivate healthy competition.
- **Notifications:** Local reminders for upcoming challenges and deadlines.
Scheduled alerts to ensure students stay on track with events and activities.
- **Monetisation:** Offers premium features and access to exclusive challenges through an in-app purchase system.
- **User Feedback:** Allows users to provide reviews and feedback within the application for continuous improvement.

LEARN AND ACHIEVE | Flutter

- **Quiz Engine:** Dynamic quizzes with real-time result generation, detailed analysis, and progress tracking.
- **E-Commerce Integration:** In-app purchase feature for ordering syllabus bundles and study materials.
- **Content Management:** Organized study material with tagging and filtering for quick access.
- **Gamification Elements:** Rewards for completing quizzes and progress milestones.
- **User-Friendly Dashboard:** Displays syllabus, purchased materials, and quiz options for seamless navigation.

FieldMotion | Field Service Management App | Flutter

Tech Stack: Flutter, GetX, SQLite, PHP APIs, Google Maps, Barcode Scanner.

Key features:

- **Offline Support:** Uses SQLite for seamless local data storage and offline functionality.
- **Secure Local Authentication:** Login via device biometric or PIN authentication.
- **Comprehensive Modules:** Includes Jobs, Assets, Invoices, Customers, Stocks, Purchase Orders, Tasks, and Quotes.
- **Google Maps Integration:** Visual display of job locations and routing.
- **Barcode Scanning:** Enables fast identification and management of inventory or assets.
- **Network Awareness:** Detects online/offline status and syncs data accordingly.
